SalahEldin Kamil

CyberSecurity Analyst

salaheldin.fikrikamil@gmail.com LinkedIn Github Blog Open to relocation – requires visa sponsorship

SUMMARY:-

Cybersecurity professional specializing in malware analysis and SOC operations, with hands-on experience in malware reverse engineering, YARA rules creation, and alert investigation. Passionate about reverse engineering, threat intelligence, and continuous learning, with a strong drive to protect systems and support effective security operations.

TRAININGS & COURSES:-

Cyber Security Bootcamp 02/2024 – 03/2024
Information Technology Institute (ITI) Sponsored by Zinad IT Cairo, Egypt

This bootcamp is specifically designed to prepare individuals for real-world challenges in the field of cybersecurity. One of the highlights of this training program was the Capture The Flag (CTF) competition, which provided participants with hands-on experience in tackling various security scenarios:

- **Network Concepts & Attacks**
- **Web Concepts & Attacks**
- **Forensics**
- **Cryptography**
- **Reverse Engineering**

CyberTalents Trainee 08/2023 – 09/2023
Information Technology Institute (ITI) Sponsored by CyberTalents Cairo, Egypt

intensive online training program jointly organized by the Information Technology Institute (ITI) and CyberTalents, focused on the fundamentals of cybersecurity. Throughout the course, we delved into crucial topics such as:

- **Introduction to Cybersecurity**
- **Network Concepts & Attacks**
- **Web Concepts & Attacks**
- **Forensics**
- **Cryptography**
- **Reverse Engineering**

Advanced Malware Analysis 09/2024
Issued by MaharaTech ITI Learning Platform

- **Debugging & reverse engineering tools** (x64dbg, IDA, plugins, breakpoints, patching, tracing)
- **Malware techniques & evasion** (injection, persistence, privilege escalation, anti-debugging, encryption/encoding)
- **Advanced malware analysis** (Office, PDF, JS, PowerShell, .NET, Java, AutoIt, Python samples)
- **Mobile & practical analysis skills** (Android APK analysis, ADB, emulation, real-world malware cases & deobfuscation)

Malware Reverse Engineering 08/2024
Issued by MaharaTech ITI Learning Platform

- **Windows internals** (processes, threads, memory, registry, handles)
- **x86 assembly & instruction types** (data, arithmetic, control flow, etc.)
- **Code disassembly analysis skills** (stack layout, variables, loops, structures in assembly)

SOC Level 1 Tryhackme Path
This path introduces a wide array of essential defensive security topics and real-world analysis scenarios.

- Learn SOC tools and operations
- Explore network and web attacks
- Monitor endpoints for threats
- Utilise SIEM to handle incidents

PROJECTS & MALWARE ANALYSIS WRITEUPS:-

Lazarus Group
A complete threat actor profile of Lazarus Group — the North Korean state-sponsored APT behind the Bybit heist, WannaCry, and the Bangladesh Bank SWIFT fraud. Covers attribution, aliases, historical timeline, objectives, and a full breakdown of the group's major publicly reported campaigns from 2014 to the present.

Stealc Stealer: Technical Reverse Engineering Report
Full reverse engineering of a Stealc stealer sample. The binary resolves all operational strings at runtime using Base64 + RC4 decryption, then performs dynamic API resolution before conducting host fingerprinting, CIS-region evasion, browser credential extraction (Chromium + Firefox), Steam/Outlook/WinSCP data theft, desktop screenshot capture, and PowerShell-based loader execution — all exfiltrated to a typosquatted Cloudflare-mimicking C2 domain.

VoidStealer: Analysis of a MaaS Infostealer with Steam-Based C2 and ABE Bypass
VoidStealer is a Malware-as-a-Service (MaaS) infostealer first marketed on darkweb forums in mid-December 2025 and actively developed since. The sample is a Windows binary performing host fingerprinting, WMI-based reconnaissance, exception-driven anti-debugging, Steam Community-based C2 resolution, and Application-Bound Encryption (ABE) bypass for Chrome and Edge credential extraction. Strings are obfuscated using per-key Base64 + RC4 decryption.

Vulcan Malware: Analysis of a Multi-Persistent Go-Based Linux Implant
A multi-architecture Linux implant written in Go, distributed as UPX-packed ELF binaries. Vulcan establishes over seven simultaneous persistence mechanisms, communicates via an AES-GCM encrypted C2 channel, and performs wide-scope network scanning targeting SSH, Redis, Docker, ADB, and Telnet services.

TECHNICAL SKILLS:-

Malware Analysis Reverse Engineering
Static analysis - Dynamic analysis

YARA

Operating Systems Internals

LLM

IDA Pro

Intel X86 ,X64 Assembly

Linux Bash Scripting

Phishing emails Analysis

X64dbg

C|C++|Python + OOP

Endpoint Security (EPP, EDR)

SIEM Solutions(Qradar ,Splunk,Elastic)

AWARDS:-

First Place on MENA region and the 14th place Globally in CSAW24 CTF Qualifications 09/2024
csaw.io

3rd Place at ICMTC-CSC CTF Finals 2024 & 6th in Quals 07/2024
Hosted by Military Technical College in Egypt & EG-CERT

3rd Place at NahamCon CTF 2024 05/2024
Hosted by JustHacking

2nd Place at Cyber Champions CTF Quals 03/2024
Zinad IT & Information Technology Institute

80th Place at BHMEA2023 CTF Finals & 34th in Quals 11/2023
BlackHat Mea & NEOM & Saudi Federation for Cybersecurity Programming and Drones

2nd Place at ITI & CyberTalents CTF 09/2023
Information Technology Institute & CyberTalents

34th Place at ASCWarGames Qualification CTF 08/2023
ASCWarGames

5th place at IEEE Victoris 2.0 CTF 2023
Institute of Electrical and Electronics Engineers (IEEE)

43th place at Google Code jam (Problem Solving) 2022
Google

54th at ICPC Egyptian CPC 08/2021
The International Collegiate Programming Contest

VOLUNTEERING & STUDENT ACTIVITIES:-

Member at 0xL4ugh Team present
We create internal, external CTFs, and we participate in nearly all the big Competitions inside outside of Egypt.

CAT Reloaded 09/2022 – 2024
Cyber Security Reverse & Malware analysis Head
Helped a group of cyber security students to sharpen their skills by:
- Walking through a road map.
- Providing technical sessions.
- Supervising technical tasks.

ICPC (International Collegiate Programming Contest) 08/2020 – 08/2023
Technical Mentor & Media Head
ICPC Mansoura is one of ICPC Communities in Africa & Arabia Region. An international non-profit organization dedicated to annual multi-tiered competitive programming competition among the universities of the world.
Helped a group of Computer Science & Non-Computer Science students to sharpen their skills by:
- Providing technical sessions..
- Managed volunteers in applying the team's vision via social media.

EDUCATION:-

Bachelor of Computer & Information Science 08/2020 – 08/2024
Faculty of Computer & Information Sciences - Mansoura University Mansoura, Egypt

LANGUAGES:-

Arabic
Native

English
IELTS: 6
