

SalahEldin Kamil

CyberSecurity Analyst

✉ salaheldin.fikrikamil@gmail.com 📞 +254703745505 📍 Nairobi, Kenya 📅 28/12/2001 🔗 LinkedIn 🐙 Github 📝 Blog

SUMMARY:-

Cybersecurity professional specializing in malware analysis and SOC operations, with hands-on experience in malware reverse engineering, YARA rules creation, and alert investigation. Passionate about reverse engineering, threat intelligence, and continuous learning, with a strong drive to protect systems and support effective security operations.

TRAININGS & COURSES:-

Cyber Security Bootcamp

02/2024 – 03/2024

Information Technology Institute (ITI) Sponsored by Zinad IT

Cairo, Egypt

This bootcamp is specifically designed to prepare individuals for real-world challenges in the field of cybersecurity. One of the highlights of this training program was the Capture The Flag (CTF) competition, which provided participants with hands-on experience in tackling various security scenarios:

- Network Concepts & Attacks
- Web Concepts & Attacks
- Forensics
- Cryptography
- Reverse Engineering

CyberTalents Trainee

08/2023 – 09/2023

Information Technology Institute (ITI) Sponsored by CyberTalents

Cairo, Egypt

Intensive online training program jointly organized by the Information Technology Institute (ITI) and CyberTalents, focused on the fundamentals of cybersecurity. Throughout the course, we delved into crucial topics such as:

- Introduction to Cybersecurity
- Network Concepts & Attacks
- Web Concepts & Attacks
- Forensics
- Cryptography
- Reverse Engineering

Advanced Malware Analysis

09/2024

Issued by MaharaTech ITI Learning Platform

- Debugging & reverse engineering tools (x64dbg, IDA, plugins, breakpoints, patching, tracing)
- Malware techniques & evasion (injection, persistence, privilege escalation, anti-debugging, encryption/encoding)
- Advanced malware analysis (Office, PDF, JS, PowerShell, .NET, Java, AutoIt, Python samples)
- Mobile & practical analysis skills (Android APK analysis, ADB, emulation, real-world malware cases & deobfuscation)

Malware Reverse Engineering

08/2024

Issued by MaharaTech ITI Learning Platform

- Windows internals (processes, threads, memory, registry, handles)
- x86 assembly & instruction types (data, arithmetic, control flow, etc.)
- Code disassembly analysis skills (stack layout, variables, loops, structures in assembly)

SOC Level 1 Tryhackme Path

This path introduces a wide array of essential defensive security topics and real-world analysis scenarios.

- Learn SOC tools and operations
- Explore network and web attacks
- Monitor endpoints for threats
- Utilise SIEM to handle incidents

PROJECTS & MALWARE ANALYSIS WRITEUPS:-

Lazarus Group

A complete threat actor profile of Lazarus Group — the North Korean state-sponsored APT behind the Bybit heist, WannaCry, and the Bangladesh Bank SWIFT fraud. Covers attribution, aliases, historical timeline, objectives, and a full breakdown of the group's major publicly reported campaigns from 2014 to the present.

Stealc Stealer: Technical Reverse Engineering Report

Full reverse engineering of a Stealc stealer sample. The binary resolves all operational strings at runtime using Base64 + RC4 decryption, then performs dynamic API resolution before conducting host fingerprinting, CIS-region evasion, browser credential extraction (Chromium + Firefox), Steam/Outlook/WinSCP data theft, desktop screenshot capture, and PowerShell-based loader execution — all exfiltrated to a typosquatted Cloudflare-mimicking C2 domain.

VoidStealer: Analysis of a MaaS Infostealer with Steam-Based C2 and ABE Bypass

VoidStealer is a Malware-as-a-Service (MaaS) infostealer first marketed on darkweb forums in mid-December 2025 and actively developed since. The sample is a Windows binary performing host fingerprinting, WMI-based reconnaissance, exception-driven anti-debugging, Steam Community-based C2 resolution, and Application-Bound Encryption (ABE) bypass for Chrome and Edge credential extraction. Strings are obfuscated using per-key Base64 + RC4 decryption.

Vulcan Malware: Analysis of a Multi-Persistent Go-Based Linux Implant

A multi-architecture Linux implant written in Go, distributed as UPX-packed ELF binaries. Vulcan establishes over seven simultaneous persistence mechanisms, communicates via an AES-GCM encrypted C2 channel, and performs wide-scope network scanning targeting SSH, Redis, Docker, ADB, and Telnet services.

TECHNICAL SKILLS:-

Malware Analysis Reverse Engineering <i>Static analysis - Dynamic analysis</i>	IDA Pro	X64dbg
YARA	Intel X86 ,X64 Assembly	C C++ Python + OOP
Operating Systems Internals	Linux Bash Scripting	Endpoint Security (EPP, EDR)
LLM	Phishing emails Analysis	SIEM Solutions(Qradar ,Splunk,Elastic)

AWARDS:-

First Place on MENA region and the 14th place Globally in CSAW24 CTF Qualifications  <i>csaw.io</i>	09/2024
3rd Place at ICMTC-CSC CTF Finals 2024 & 6th in Quals  <i>Hosted by Military Technical College in Egypt & EG-CERT</i>	07/2024
3rd Place at NahamCon CTF 2024  <i>Hosted by JustHacking</i> 	05/2024
2nd Place at Cyber Champions CTF Quals  <i>Zinad IT</i>  & <i>Information Technology Institute</i> 	03/2024
80th Place at BHMEA2023 CTF Finals & 34th in Quals  <i>BlackHat Mea</i>  & <i>NEOM</i>  & <i>Saudi Federation for Cybersecurity Programming and Drones</i> 	11/2023
2nd Place at ITI & CyberTalents CTF  <i>Information Technology Institute</i>  & <i>CyberTalents</i> 	09/2023
34th Place at ASCWarGames Qualification CTF  <i>ASCWarGames</i> 	08/2023
5th place at IEEE Victoris 2.0 CTF <i>Institute of Electrical and Electronics Engineers (IEEE)</i> 	2023
43th place at Google Code jam (Problem Solving)  <i>Google</i> 	2022
54th at ICPC Egyptian CPC  <i>The International Collegiate Programming Contest</i>	08/2021

VOLUNTEERING & STUDENT ACTIVITIES:-

Member at oxL4ugh Team  <i>We create internal, external CTFs, and we participate in nearly all the big Competitions inside outside of Egypt.</i>	present
CAT Reloaded  <i>Cyber Security Reverse & Malware analysis Head</i> Helped a group of cyber security students to sharpen their skills by: • Walking through a road map. • Providing technical sessions. • Supervising technical tasks.	09/2022 – 2024
ICPC (International Collegiate Programming Contest)  <i>Technical Mentor & Media Head</i> ICPC Mansoura is one of ICPC Communities in Africa & Arabia Region. An international non-profit organization dedicated to annual multi-tiered competitive programming competition among the universities of the world. Helped a group of Computer Science & Non-Computer Science students to sharpen their skills by: • Providing technical sessions.. • Managed volunteers in applying the team's vision via social media.	08/2020 – 08/2023

EDUCATION:-

Bachelor of Computer & Information Science <i>Faculty of Computer & Information Sciences - Mansoura University</i>	08/2020 – 08/2024 Mansoura, Egypt
--	--------------------------------------

LANGUAGES:-

Arabic <i>Native</i>	English <i>IELTS: 6</i>
--------------------------------	-----------------------------------
